There were grounds for supposing that if an expanding nodule of disentangled space and time were introduced arbitrarily through some mechanism'-pictured by some people as a bubble appearing in soda water, although this wasn't really accurate.-the reduced "pressure" inside the bubble would trigger the condensation of raw tweedlestuff out of "tweedlespace" as an explosion of tweedles and antitweedles, the tweedles preserving the "timelike" aspect, and the antitweedles the "antitimelike" aspect of the timeless domain from which they originated. Their mutual affinity would precipitate their combination into a dense photon fluid in which timelessness became reestablished, which tied in with Relativity by explaining why time stood still, for moving photons and accounting for the strange connection in the perceived universe between the rate at which time flowed and the speed of light. The high-energy conditions of the Primordial photon fluid, the density of which would have approximated that of the atomic nucleus, would favor the formation of "tweeplet" entities to give rise to matter interacting under conditions dominated by the strong nuclear force, which manifested itself to restore nonAbelian gauge symmetry with respect to the variance introduced by the separation of space and time.
