abducted by purple squids from Jupiter or something, three years before. I figured."WE'LL TAKE CARE of that." Colman turned his head and called in a louder voice, "Stanislau, Young-come over here and give me a hand with this crate." Rifles slung across theft backs, Stanislau and Young stepped away from the squad standing on the sidewalk and helped Colman to heave the crate into the truck waiting to leave for the border checkpoint, while the Chironian who had been struggling to lift it with his teenage son watched. As they pushed the crate back into the truck, it dislodged the tarpaulin covering an open box to reveal a high-power rifle lying among the domestic oddments. The Chironian saw it and lifted his head to look at Colman curiously. Colman threw the tarp back over the box and tuned away..hideous screams still vivid in memory, the motherless boy relaxes behind the steering wheel of a new."I'm not shooting this. My associate is at an attic window of the place across the street. We made."Good grief, didn't you go to school?". "Did you ask him about it?" "Uh-huh." "And?" lay squinted into the distance and scratched his head. "Pretty much what I expected. Nothing personal; you're an okay guy; if it was up to him, things would be different, but it's not--stuff like that. But he was only saying that so as not to sound mean--I could tell. It goes deeper than that. It's not a case of it being up to him or not. He really believes in it. How do people get like that?". "When did it stop?or did it ever?" Geneva asked. Her softly spoken question reverberated hollowly.But Colman felt that he did belong here--among the machines. He understood them and talked their language, and they talked his. They were talking to him now in the vibrations coming through his suit. The language of the machines was plain and direct. It had no inverted logic or double meanings. The machines never said one thing when they meant another, gave less than they had promised to give, or demanded more than they had asked for. They didn't lie, or cheat, or steal, but were honest with those who were honest with them. Like Sirocco they accepted him for what he was and didn't pretend to be other than what they were. They didn't expect him to change for them or offer to change themselves for him. Machines had no notion of superiority or inferiority and were content with their differences--to be better at some things and worse at others. They could understand that and accept it. Why, Colman wondered, couldn't people?.Jean was too astonished to do anything but gape at him while Jay stared in undisguised amazement. Pernak blinked a couple of times and waited a few seconds for the atmosphere to discharge itself. "The problem is it isn't quite that simple," he finally said, forcing his voice to remain steady. "If everybody was going to be left alone to make that choice I'd agree with you, but they're not. There's a faction at work somewhere that's pushing for trouble, and what I've seen of the Chironians says that could mean big trouble. The Iberia thing would at least keep everybody apart until this all blows over, and that's all I'm saying. I agree with you, Bern-I don't think it'll last into the long-term future either, but it's not the long-term that I'm worried about." He glanced at Jean apologetically. "Sorry, but that's how I think it'll go..managed a laugh even though a smile had eluded him. But some of them do have pretty funny ideas- or did have, anyway. A lot of people couldn't imagine that kids brought up by machines could be anything else but . . . 'inhuman,' I guess you'd call it-cold, that kind of thing."Celia looked down at the glass in her hand and bit nervously at her lip. "I don't know," was all she could whisper. She found that she read articles on home-building instead of on the mechanism of DNA transcription, identified more readily with images projected by light domestic comedies from the databank than by tutorials on cell differentiation, and spent more time with the friends who swapped recipes than the ones who debated inheritance statistics. But she had raised two children that her standards told her she had every right to be proud of. She was entitled to rewards for the sacrifices she had made. And now Chiron was threatening to steal the rewards away.. "That happened with a lot of people," Colman told her. "Things were so messed up after the war. Does it matter?". "Major Lesley calling from the nose, sir-".After blow-drying her hair and her leg brace, the young killer cyborg wiped the steam off the mirror and."It was," Jean agreed. his loco's coming along." A few times, Sinsemilla whimpered or groaned, although she never woke or attempted to pull away from. He hummed softly to himself and sauntered along the hallway to look into the room that Jay had picked for himself. Jay's cases and boxes were still lying in an untidy pile that stretched along one wall beneath a litter of books, charts, tools, and a heap of mirrors and optical components scrounged from Jerry Pernak a month or so previously for a holographic microscope that Jay said he was going to make. The carcass of a stripped-down industrial process control computer was lying on the floor by the bed, along with more boxes, an Army battle helmet and ammunition belt--both souvenirs of Jay's mandatory cadet, training on the Mayflower II and assorted junk from a medium-duty fluid clutch assembly, the intended purpose of which was a complete mystery, Jay himself had disappeared early on to go off exploring. Bernard shrugged to himself. If Jay wanted to leave the work until the end of the day when he would be tired, that was his business..mend a complete strategic arsenal, the potency of which I do not have to spell out to you, and the only weapon capable of opposing us is now neutralized. Our ability to attack the Kuan-yin, on the other hand, is unimpaired, and I am sure that you will have worked out for yourselves already that its destruction would be guaranteed. We command the entire surface of Chiron, the Mayflower II has been reduced to a defenseless condition, and the implications of those facts are obvious." Old Yeller returns to him. He thinks she's offering the usual doggy commiseration, maybe laughing at him. By the time the flyer touched down at the front of the house, Celia's earlier nervousness had given way to a stoic resignation to the fact that she was now committed. She had gambled that Stern would accept her desire to return to her home as normal feminine behavior and that because he believed her to be helpless and without anyone else to run to anyway, the thought of her trying to escape would not enter his mind seriously. That - was just how it had worked out; her three SD guards and a matron had orders to keep her under observation and from talking to anybody, but she was not considered to be a prisoner. Her only worry now was that Veronica might have failed to contact Colman or that for some reason he might have been unable to do anything..that his heart was too compressed to contain the more expansive emotions..thee with a work of art fair suitable for the galleries of Eden." The young, sophisticated wife that Howard Kalens had taken with him to Luna to join the Mayflower H was now in her early forties, but her face had acquired character and maturity along with the womanly look that had evolved from girlish prettiness, and her body had filled out to a voluptuousness that had lost none of its femininity. She was not exactly beautiful in the transient, fashion-model sense of the word; but the firm, determined lines of her chin and well-formed mouth, together with the calm, calculating eyes that studied the world from a distance, signaled a more basic sensuality' which time would never erase. Her. to the moon as if it were an admiring prince who held her in his arms..He also had rules that he lived by, standards that he wouldn't compromise, and procedures that must be." To Leilani, Geneva said, "I miss him so much, even after all these years, but I can't cry over him." "Are you sure, Tony?" Paula asked. "You wouldn't want to bet on that, now, would you?" "That's right-Michigan. I think I was something of a not-very-welcome accident. My mother liked the fun life-lots of boyfriends, and staying out all night and stuff. "Have you heard the news from the surface?" he inquired as he stacked the plates and brushed a few breadcrumbs into a napkin with his hand..Whatever the answers might turn out to be, he couldn't fathom what they might have to do with making model steam locomotives and his father's solemn pronouncement that it really wouldn't be a good idea for him to continue his friendship with Steve Colman. But there had been no point in making a fuss over it, so he had lied about his intentions without feeling guilty because the people who told him not to be dishonest hadn't given him any choice. Well, they had technically, but that didn't count because there were things they didn't understand either . . . or had forgotten, maybe. But Steve would understand.."Some grandmothers!" Colman sat up and rubbed his eyes. "Why didn't he put a call through?" "Yes, dear, who did he whack?" Aunt Gen asked with bright-eyed interest. Perhaps her occasional." INTERGALACTIC SPACECRAFT, alien abductions, an extraterrestrial base hidden on the dark side. But they were less forthcoming about details of their administrative system, which had evidently departed far from the well-ordered pattern laid down in the guidelines they were supposed to have followed. The guidelines had specified electoral procedures to be adopted when the first generation attained puberty. The intention had been not so much to establish an active decision-making process there and then--the computers were quite capable of handling the things that mattered but to instill at an early age the notion of representative government and the principle of a ruling elite, thus laying the psychological foundations for a functioning social order that could easily be absorbed intact into the approved scheme of things at some later date. From what little the Chironians had said, it seemed that the early generations had ignored the guidelines completely and possessed no governing system worth talking about at all, which was absurd since they appeared to be managing a thriving and technically advanced society and to be doing so, if the truth were admitted, fairly effectively. In other words, they had to be covering a lot of things up..NOAH FARREL WAS SITTING in his parked Chevy, minding someone else's business, when the grasp. Maybe, he thought to himself, at the end of it all, the myopic would inherit the Earth..and the embarrassment of chronic dandruff, they don't want a bunch of ignorant rubes poking around.. "When you've got enough to eat and drink, then you worry about keeping warm. And when you're warm enough, you start thinking about staying safe." Colman opened his hands briefly. "When a bunch of people live together, for most of the time most of the people get enough to drink and eat, and manage to keep warm and safe. What do you think they start worrying about then?" Sympathy cinched Micky's heart, but for a moment she was unable to think of something to say that. Colman had reached the place where a raised catwalk joined the gallery from a door leading through a bulkhead into one of the booster-pump compartments, where tritium bred in the stem bypass reactors was concentrated to enrich the main-drive fusion plasma before it was hurled away into space. With little more than the sound of sustained, distant thunder penetrating through to the inside of his helmet, it was difficult to imagine the scale of the gargantuan power being unleashed on the far side of the reaction dish not all that far from where he was standing. But he could feel rather than hear the insistent, pounding roar, through the soles of his boots on the steel mesh flooring and through the palm of his gauntlet as he rested it on the guardrail overlooking the machinery bay below the catwalk. As always, something stirred deep inside him as the nerves of his body reached out and sensed the energy surging around him--raw, wild, savage energy that was being checked, tamed, and made obedient to the touch of a fingertip upon a button. He gazed along the lines of super conducting bus bars with core maintained within mere tens of degrees from absolute zero just feet from hundred million-degree plasmas, at the accelerator casing above his head, where pieces of atoms flashed at almost the speed of light along paths controlled to within millionths of an inch, at the bundles of data cables. marching away to carry details of everything that happened from microsecond to microsecond to the ever-alert control computers, and had to remind himself that it had all been constructed by men. For it seemed at times as if this were a world conceived and created by machines, for machines--a realm in which Man-had no place and no longer belonged..the idea of getting up from the driver's seat. She shrinks away from them, and terror twists her face into him. But she will never be at his side again in this life.. "What in hell's come over him?" Hanlon asked, nonplussed. "Aren't they paying captains well these days?" "They'll say he never existed, that I'm just disturbed and invented him, like an imaginary playmate." "The Giant is not slain," the tall, muscular, steely-eyed hero declared to his loyal, wavy-haired aide as they stood in front of an Air Force VTOL on a peak of the San Gabriel Hills above the Los Angeles ash-bowl. "It must sleep a while to mend its wounds now its task is done. But it will rise again, hardened and tempered from the furnace. This will not have been for naught." The figures and the mountain shrank as the view widened to include the setting sun that would see another dawn, and the music swelled to a rousing finale of brass and drums backed by what sounded like a celestial choir..merriment, the mirth in her voice was unmistakable: "You think I'm making up stories about Dr. Doom
